

Formula SAE-A 2022

SES Update

Teams are advised that an updated and improved version (v1.5) of the 2022 SES for both Steel Tube and Monocoque has been posted to the local FSAE-A Resources web site ahead of the USA posting due to some delays with updating of the US website.

This version corrects a number of minor problems with edge cases, and improvements/clarifications for monocoque chassis, and some improved images. Teams should therefore use this version rather than the earlier version posted on the US website.
